■■ DRIA INFRASTRUCTURE SYSTEMS: CONFIGURATION SPECIFICATION MATRIX

INDUSTRIAL DATA CONDUIT INTERFACE | SYSTEM INTEGRATION NODE PREVIEW

DOCUMENT REGISTER: CSI_MasterFormat_Unified_Silo_A_B_v6.6.pdf

ISSUING PARENT AUTHORITY: DRIA Home Builders (Pty) Ltd (Reg. No. K2014137652)

DISTRIBUTION STATUS: EVALUATION SPECIFICATION GRID — SECURE LOCKBOX PROTECTED

MASTER GATEWAY ROUTER: https://driahomebuilders-publisher-systems.github.io/

I. PLATFORM INTEROPERABILITY & SYSTEM RUNTIME DEPENDENCIES

This master configuration engine compiles production-grade data field structures across multiple interconnected infrastructure divisions. This software asset operates strictly as an engineered Data Conduit Interface and Systems Integration Layer Engine designed to automate zero-friction ingestion into downstream enterprise resource planning environments (Sage Cloud ERP, Oracle Primavera P6, Procore Admin Ledgers, and SAP S/4HANA).

The fixed commercial values stated herein represent the direct recovery of comprehensive time and labor hours expended to manually clean, compile, parse, and structurally isolate these 75,520 production data lines into an uncorrupted master schema grid, entirely eliminating manual configuration cycles for the client's internal DBAs.

- **Authoritative Copyright Ownership Notice:** MasterFormat® and all associated alphanumeric structures remain subject to the absolute intellectual-property rights, registered trademarks, and licensing parameters of their respective owners. The Construction Specifications Institute (CSI), Inc. is the absolute creator, legal owner, and copyright authority for these global industry standards.
- **Systems Integration Layer Warranty Boundary:** References to these standards within the DRIA integration engine are maintained strictly for data classification, architectural alignment, and cross-platform interoperability purposes, and do not imply institutional sponsorship, endorsement, certification, or direct affiliation with CSI.
- **Licensee Direct Compliance Mandate:** The acquisition or download of any raw evaluation schema components or unbundled division nodes does not grant, convey, or substitute for a corporate end-user license from CSI. The purchasing client or enterprise systems integration partner bears sole, direct, and unconditioned liability for maintaining organizational legal compliance and establishing all necessary commercial licensing agreements directly with the Construction Specifications Institute (CSI). DRIA Home Builders (Pty) Ltd accepts zero liability for cross-platform compliance omissions executed by the client.

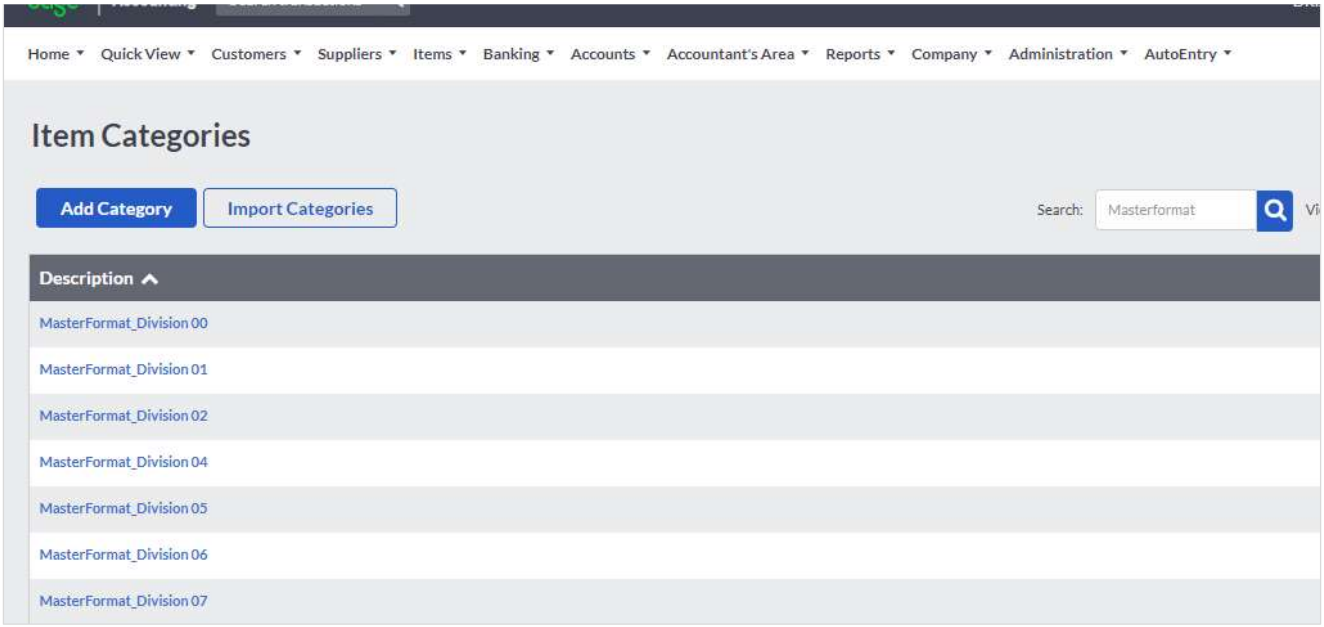

II. VOLUME I — SILO A: SUPERSTRUCTURE & SKIN INTEGRATION CORE

This asset manages structural database field mappings across Division 05 (Metals), Division 06 (Woods, Plastics, & Composites), and Division 09 (Finishes - Surface Coatings).

> *SILO A RUNTIME INTERACTION FAULT ALERT: Ingestion of this matrix into active enterprise ledgers requires localized initialization via our foundational Division 03 (Concrete) and Division 31 (Earthwork) crosswalk mapping parameters. Running this architecture segment or executing*

> *automated ledger explosion scripts without the root structural connection keys will cause immediate database validation faults and incomplete field errors.*

SAGE ERP MASTER TREE INTERFACE: ITEM CATEGORIES

** VISUAL VERIFICATION: Live indexing layout across Division 00 through Division 07.*

SAGE ERP DATA CONDUIT VIEWPORT: SILO A HARDENED EXCERPT

Description	Category
05 00 00-Metals	MasterFormat_Division 05
36647-Maintenance of Metals	MasterFormat_Division 05
40299-Maintenance of Structural Metal Framing	MasterFormat_Division 05

Figure 2: Division 05 structural matrix configuration view—data fields truncated right of the Category boundary for protection.

** SECURITY ISOLATION CORE: Direct data visualization locked to 'Description' and 'Category' parameters. System primary code lines and downstream token crosswalk arrays are entirely redacted under strict data containment protocols.*

III. VOLUME I — SILO B: FLUID, AIR & MECHANICAL LOGISTICS MATRIX

This contiguous asset maps relational database row parameters across Division 07 (Thermal & Moisture Protection), Division 22 (Plumbing Systems), and Division 23 (HVAC Distribution).

> *SILO B RUNTIME INTERACTION FAULT ALERT: Internal mechanical sub-modules remain static until bound to the main infrastructure power distribution line profiles governed by Division 26 (Electrical). Ledger updates committed without the corresponding end-leaf cryptographic connection keys will register as incomplete database arrays and trigger immediate system-wide validation faults during ingestion staging.*

SAGE ERP DATA CONDUIT VIEWPORT: SILO B HARDENED EXCERPT

Description	Category
07 00 00 Thermal and Moisture Protection	MasterFormat_Division 07
36708 Operation and Maintenance of Thermal and Moist...	MasterFormat_Division 07
40360 Maintenance of Dampproofing and Waterproofing	MasterFormat_Division 07

Figure 3: Division 07 thermal and moisture protection matrix configuration view—data fields truncated right of the Category boundary for protection.

** SECURITY ISOLATION CORE: Direct visualization confirms active infrastructure rows under Division 07 Thermal Ingress structures. System primary code keys and Text Field 1 strings are completely obscured to isolate engineering methodology.*

IV. QUANTITATIVE SYSTEM MATRIX AUDIT & GOVERNANCE PROTOCOL

The data infrastructure packages delivered by DRIA Home Builders (Pty) Ltd eliminate manual database compilation cycles for the client's internal engineering teams. The pagination track below verifies the true volume and scale of the master schema structure categories operating natively inside the Sage company ledger root space:

** SCALE COMPLIANCE AUDIT PASSED: Master index confirms Category tables extending to Division 46.*

SYSTEM PRICING & DEPLOYMENT FRAMEWORK

Stated configuration values are established as non-negotiable professional baseline transaction terms:

SYSTEM PRICING ELEMENT	BASELINE TRANSACTION VALUE
UNBUNDLED STANDALONE CORE VAULT NODE VALUE:	$45,000.00 USD Per Node
COMPLETE SYSTEM-OF-SYSTEMS INTEGRATION CEILING VALUE:	$1,485,000.00 USD Once-Off
THE MASTER ROUTING ENTERPRISE GATEWAY:	https://driahomebuilders-publisher-systems.github.io/

V. CYBER OPERATIONS CONTROLWEAVE GOVERNANCE BOUNDARY

This asset configuration is hard-coded and tracked under a secure ControlWeave System Context register with a HIGH Confidentiality and HIGH Integrity impact baseline. Access to secure private repositories, programmatic file validation schemas, or cryptographic escrow token releases remains strictly subject to standard corporate procurement workflows, verified wire clearing, and the formal execution of a definitive Master Software License Agreement (MSLA) issued by DRIA Home Builders (Pty) Ltd.

Unauthorized data distribution, schema fragmentation, or web scraping outside of the designated destination ledger triggers immediate system-wide license revocation and absolute blacklisting of all associated client access tokens.
